Hi chaps just fitted my sat nav mount.
I've taken one or two ideas from the forum
I think it's come out good.
I hard wired in the zumo power lead using
the canbus plug as described elsewhere.
A few photos
What do you think?

Looks brilliant just trying to work out
How you have fixed to the screen mount

Brian

Just a hole in each end of the screen pivots.

Stole the idea from another post.

It works a treat.

I was going to paint it but the aluminium

looks good in my eyes.

Of course it matches the fast black and grey version of the Rs

Nicely Done Ian... much neater and safer than the original yolk position... looks great!

Nice work Ian, fits in a very similar location to my Hornig mount but I think your solution is neater, hats off to your fabrication skills.

.....baby we were born to run

boxerboy, Apr 9, 2018 Report #7 Like Reply

I can't take the credit for fabricating it it was done by a friend.

I just pinched several ideas

Hi Ian, looks great. I plan to do something very similar in the next few weeks. One question how is the pad mounted to the aluminum rod (pad that limits the rotation). Was it via a couple of screws or other method? Thanks.

Hi Chris just by 2 countersunk screws.

Serena attached.

Regards

Ian

So how does the mount actually stay in place?

There is a hole drilled on each end of the bar which locates on the screen pivots. The bars at the bottom just stop it rotating with the screen.

Some have done it using square bar but my friend has a lathe and milling machine in his garage.

The bar is 125mm long and just fits allowing the circlip to go back on.
